

Attention

Regarding iPhone 14pro, 14proMAX, 15pro and 15proMAX.

14pro,14proMAX,15pro,15proMAX cannot use silicone cases for the main body because the main body and the lens part are thicker than 13pro and so on. (*It may be possible to use a very thin case.) The case of the main unit must be used without it. (Please be careful not to drop the case.) Also, because the lens portion protrudes, there is a possibility that it may interfere with the close-up lens of the digital swap and scratch the lens. If possible, please purchase and use a commercially available lens protection cover such as the one shown below.

Use a commercially available lens cover to protect the lens portion.
Reference product:<https://amzn.asia/d/c9o62rr>

The total thickness of the lens portion, including the lens cover and screen protection film, must be 13.2 mm or less.
